Summary:

Senior Backend & Production Systems Engineer with experience operating high-scale media and subscription platforms serving hundreds of millions of daily requests. Proven track record of owning revenue-critical systems, leading production incident resolution, scaling distributed infrastructure under rapid growth, and improving reliability and cost efficiency across complex multi-service architectures.

Skills:

Programming: Python, JavaScript, TypeScript

Technical Skills: Microservices, System Architecture & Design, Database Modeling, API Design, Scalability, Distributed Systems, AI Agents & Automation

Tools & Platforms: AWS (Lambda, S3, EC2), Docker, Kubernetes, Git, Sentry, n8n, Qdrant, Supabase, Snowflake, Flink, Fastly, Fluentbit, Datadog

Messaging & Processing: Kafka, Redis, SQS, SNS, Zookeeper, WebSocket, gRPC

Frameworks & Libraries: Node.js (Fastify, NestJS, Express), Flask, FastAPI, Django, React.js, MERN stack, Spring Boot

Databases: MongoDB, PostgreSQL, MySQL, SingleStore, Snowflake

AI & LLM Ecosystem: OpenAI GPT-4, Gemini, LangChain-style orchestration, Ollama (local LLMs), Prompt Adapters, Embedding Stores

Monitoring & Analytics: ELK Stack, Segment, Mixpanel

Version Control & CI/CD: GitHub Actions, Docker Compose

Experience:

Software Development Engineer 2 ([Gumlet](#))

03/2025 - Present, Bangalore, India

- Operate and scale a globally distributed media platform serving 300M+ daily API requests and 200k+ streamed hours/day, maintaining high availability during multi-fold growth in traffic and storage footprint.
- Assumed ownership of subscription and billing systems during revenue expansion, leading resolution of production outages and stabilizing end-to-end subscription lifecycle flows including trials, plan transitions, cancellations, and invoice automation.
- Designed and launched multi-platform live streaming capability across major social networks, delivering full stream lifecycle orchestration without degrading existing high-throughput workloads.
- Improved ingestion and migration reliability by strengthening validation logic, resolving data consistency issues, and reducing recurring failures during high-volume onboarding spikes.
- Enhanced data-layer performance and search responsiveness through query optimization and indexing strategy improvements, supporting expanding datasets and enterprise usage.
- Strengthened operational reliability by fixing storage reconciliation issues, improving automation workflows, increasing observability of background jobs, and reducing redundant system calls.
- Currently building internal AI-based monitoring to proactively detect anomalous system behavior and developing secure productivity tooling for engineers.

Technologies: Node.js (Fastify/Express), MongoDB Atlas, Redis, AWS (S3, SQS, CloudFront, MediaLive), ClickHouse, BigQuery, Stripe API, FFmpeg/Shaka Packager (pipeline integration), Docker.

Software Development Engineer 2 ([Inflection.io](#))

07/2024 - 02/2025

- Spearheaded architectural optimizations, enabling the system to scale from handling millions to billions of daily requests for seamless multi-client onboarding.

- Implemented significant system enhancements, resulting in a 20% (approximately) reduction in development time and a 15% increase in customer satisfaction as measured by customer satisfaction metrics.
- Upgraded the B2B platform's reporting infrastructure, delivering deeper insights into customer targeting and engagement, driving data-driven decision-making.
- Refined database performance by implementing targeted optimizations that decreased load times for critical reports by an impressive 70%, enabling real-time insights without impacting user experience or application speed.
- Managed the development of a streamlined log collection system with Fluentbit; established operational visibility leading to identification of 3 primary issues causing downtime in production environments.
- Executed system design improvement for 30% advancement in scalability and implemented global forms integrations with help of webhook integrations.

Technologies: gRPC, Redis, Kafka, Flask, SQS, Fluentbit, fastly, AWS S3.

Software Development Engineer 2 ([Bolt.Earth](#))

04/2022 - 02/2024, Bangalore, India

- Orchestrated a multi-channel notification system post client consultation, leading to a 30% increase in user activity and a 25% reduction in message delivery time.
- Wallet Service: Lead a team of 5 to create wallet service integrated with cashfree for seamless transaction across the platform.
- Collaborated closely with clients and the data team to identify and address the needs, resulting in the creation of a charger log analytics data pipeline poised to enhance processing efficiency and accuracy by 40%.
- API Performance Doubled with Customer Focus: Identified and resolved customer pain points, re-engineering the charger booking API to double the efficiency and increase booking rates by 50%.
- Produced in tandem with the product team to conceptualize and implement a user feedback system, leading to a 60% rise in user engagement and 25% higher customer satisfaction.
- OLAP System Optimizer: Identified and addressed customer-facing issues, refining OLAP design to cut query processing time by 45% and increase data analysis efficiency by 30%.
- User Action Tracking System Architect: Designed and implemented a comprehensive user action tracking system, integrating Kafka to achieve 100% coverage, following an in-depth analysis of user behavior.
- Referral System Innovator with Promoted Engagement: Pioneered a highly efficient referral system using Nest.js, which resulted from understanding and addressing user needs, achieving complete success in adoption and engagement.
- Realtime Routing System for Chargers: Created a realtime routing system utilizing the Google Maps API, ensuring optimal navigation and accessibility between chargers.

Technologies: RESTful API, gRPC, Redis, Kafka, Sentry, MERN stack, NestJs.

Software Engineer ([Soroco India](#))

07/2021 - 03/2022, Bangalore, India

- Interactive Dashboard Developer: Enhanced dashboard interactivity using Django and Angular, following thorough user experience research to improve usability.
- Automation Expert in Inventory Management: Developed an automated bill scanning and inventory management system for Bayer, rooted in a deep understanding of the operational challenges, leading to major efficiency gains.

Technologies: Django.

Education:

- **Dayananda Sagar College of Engineering:** BTech - Information of science and engineering
- **Chinmaya Vidyalaya:** HSE in Computer Science.
